

# Computer Organization and Structure

Homework #3  
Due: 2006/11/14

1. Convert  $4096_{\text{ten}}$ ,  $-2,047_{\text{ten}}$ , and  $-2,000,000_{\text{ten}}$  into 32-bit two's complement binary numbers, respectively, and convert the following two's complement binary numbers to be decimal numbers:
  - a.  $1111\ 1111\ 1111\ 1111\ 1111\ 1111\ 0000\ 0110_{\text{two}}$ ;
  - b.  $1111\ 1111\ 1111\ 1111\ 1111\ 1111\ 1110\ 1111_{\text{two}}$ ;
  - c.  $0111\ 1111\ 1111\ 1111\ 1111\ 1111\ 1110\ 1111_{\text{two}}$ .
  
2. The following MIPS instruction sequence could be used to implement a new instruction that has two register operands. Give the instruction a name and describe what it does. Note that register \$t0 is being used as a temporary.

```

srl  $s1, $s1, 1    #
sll  $t0, $s0, 31   # These 4 instructions accomplish "new $s0 $s1"
srl  $s0, $s0, 1    #
or   $s1, $s1, $t0  #
    
```

3. The ALU supported set on less than ( $slt$ ) using just the sign bit of the adder. Let's try a set on less than operation using the values  $-7_{\text{ten}}$  and  $6_{\text{ten}}$ . To make it simpler to follow the example, let's limit the binary representations to 4 bits:  $1001_{\text{two}}$  and  $0110_{\text{two}}$ .

$$1001_{\text{two}} - 0110_{\text{two}} = 1001_{\text{two}} + 1010_{\text{two}} = 0011_{\text{two}}$$

This result would suggest that  $-7_{\text{ten}} > 6_{\text{ten}}$ , which is clearly wrong. Hence we must factor in overflow in the decision. Modify the 1-bit ALU in the following figures to handle  $slt$  correctly.

Figure 1: A 1-bit ALU that performs AND, OR, and addition on a and b or b'.

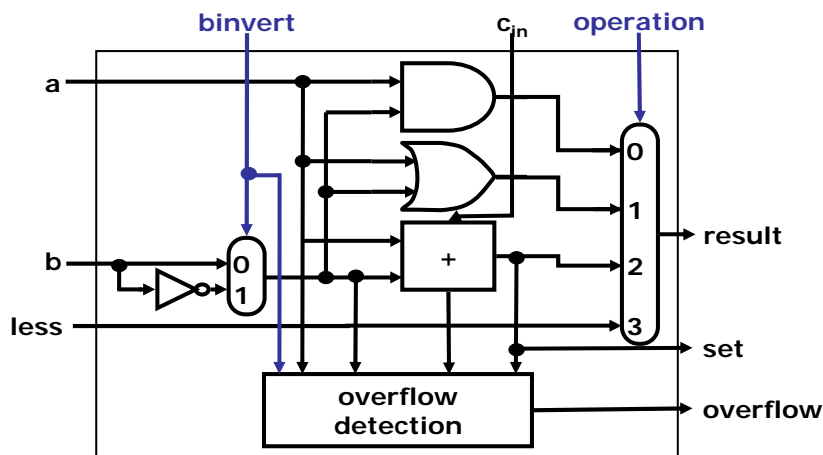

Figure 2: A 1-bit ALU for the most significant bit.

4. Add  $2.85_{\text{ten}} \times 10^3$  to  $9.84_{\text{ten}} \times 10^4$  and add  $3.63_{\text{ten}} \times 10^4$  to  $6.87_{\text{ten}} \times 10^3$ , respectively, assuming that you have only three significant digits, first with guard and round digits and then without them.
5. Given the bit pattern:

1010 1101 0001 0000 0000 0000 0010

what does it represent, assuming that it is

- a. a two's complement integer?
- b. an unsigned integer?
- c. a single precision floating-point number?
- d. a MIPS instruction?
